It's About Time Dentist Are Doing Botox!

The Truth is I have been doing Botox and dermal fillers for quite some time now. One question that my patients ask me is, "Aren't Botox and dermal filler procedures performed by Dermatologist and general plastic surgeons?" My answer to my patients is "They might of been the first to integrate these services into their offices, but that does not make these "specialty" procedures by any means. The question that should be asked is WHY NOT?

Dentists are head and neck experts. We are able to give you local anesthetic injections if required to make you more comfortable during your facial treatment. Most physicians and nurses use topical anesthetics and ice on the skin to numb the patient, but these treatments can still be uncomfortable for them. As you know, dentists use local anesthetics for most of the procedures we perform. Using a little local anesthetic in the area before any facial treatment makes the experience more comfortable, quick and relatively painless.

One of my recent new patients said to me after the procedure "I have been getting Botox and fillers for years, and this is the most painless experience I ever had!"

Botox and Dermal fillers are used to complement many aesthetic dentistry cases creating a beautiful, younger-looking smile around the teeth and overall appearance.

In addition, our menu of options will help you with individualized treatment chosen specifically for you by myself or Cathy Stager, our licensed Esthetician and may include chemical peels, masks, advanced exfoliation solutions.

Whether you are trying to smooth fine lines and wrinkles, improve the texture of your skin, even out skin discoloration, reduce redness or clear acneic/blemished skin, we have a treatment that is right for you.

Contact Cathy at our office to schedule a free consultation and experience the transforming skin treatments our patients are raving about.
